

Atlantis®

# Deliver the best of both worlds

## Why choose between stability and easy maintenance?

Fully edentulous patients want both the stability of a fixed solution and the easier hygiene of a removable prosthesis. By providing the friction-retained, conometric retention of the **Atlantis Conus concept**, your clinical partners no longer need to compromise on a secure fit or simplified maintenance for their patients.

- Does not require additional equipment or investment in software to incorporate into the dental laboratory.
- Precision - Virtual Atlantis Design (VAD) proprietary software ensures that abutments are designed to be precisely parallel for optimal fit and long-term function of the prosthesis.
- Atlantis Conus abutments are available in titanium and gold-shaded titanium, for all major implant systems<sup>1</sup>

**Because a little friction is a good thing.**
